Professional Summary

Senior Full Stack Software Engineer with 13+ years of experience designing, building, and maintaining scalable web applications and distributed systems. Strong background in full-stack development (React, Node.js, Python, Java, C#). Experienced in leading technical initiatives, contributing to system design decisions, mentoring engineers, and delivering production-grade enterprise software in fast-paced environments. Early adopter of AI-driven software engineering practices, leveraging multiple coding agents and AI-assisted development environments to accelerate implementation and deployment.

Professional Experience

Senior Full Stack Development Engineer | Houzz (Aug 2019 – Jan 2026)

- Led design and development of core financial and operational modules from architecture through production support in a cloud-native environment. Worked on AWS-based infrastructure using Docker, Kubernetes, CI/CD pipelines, and monitoring systems (Grafana), supporting scalable production services.
- Enhanced user experience and system responsiveness by implementing real-time communication capabilities via WebSockets. Built and delivered key financial and operational modules, including tax calculation engine, estimates, budgeting, and time & expenses reporting systems.
- Provided technical leadership, code reviews, and mentoring within distributed engineering teams, improving engineering consistency and delivery quality.
- Worked with multiple AI coding agents and AI-assisted development environments (primarily Cursor and Claude) to support software engineering workflows, including code generation, debugging, refactoring, code review, and rapid prototyping across backend and infrastructure systems.

Senior Full Stack Development Engineer | Clarizen (Jan 2015 – Aug 2019)

- Led front-end architecture and implementation for SaaS product features built on a microservices-based backend using Java Spring and AWS.
- Designed and delivered client-side features from proof of concept to production, including ongoing maintenance and monitoring.
- Built and maintained integrations with external enterprise systems (Salesforce, Intacct, Jira) across cloud and on-premise environments. Developed and supported API-based integrations with third-party services.

Software Development Engineer | NCR Retail (Aug 2012 – Jan 2015)

- Developed and deployed customizable client-server retail software solutions for enterprise customers in the UK and USA, contributing across the full delivery lifecycle while applying Agile practices, clean code principles, and extensible API-driven system design to support diverse customer requirements.

Skills

AI Tools: Cursor, Claude **Frontend:** React, Redux, React Router, React Hooks, Apollo Client, GraphQL, Socket.IO, shadcn/ui, SASS/LESS **Backend:** Node.js, Express, rest API, microservices **Message queues:** RabbitMQ, Bullmq **Databases:** PostgreSQL, Redis, Sequelize ORM, Redash, pgAdmin **Testing stack:** Jest, Mocha, Playwright **Infrastructure & DevOps:** AWS, Docker, Kubernetes (K8s), Lens, CircleCI, CI/CD Pipelines, Grafana, AWS S3 **Languages:** JavaScript, Python, Java, C# **Other Tools:** GrowthBook, Grafana, Elasticsearch, Lodash, Git, Jira, ESLint

Education

Bachelor of Science (B.Sc.) in Computer Science | The Academic College of Tel-Aviv, Yaffo 2009–2013

Department of Computer Science, specialization in networking and web development.
